Abstract: **PURPOSE:** To provide the titled fuel produced by dissolving a flame coloring substance such as fatty acid alkali or alkaline earth metal salt in a specific liquid fuel and generating a colored flame having fantastic atmosphere by being sucked with a wick floated on a liquid surface and burning the sucked fuel near the liquid surface.

**CONSTITUTION:** A wick is floated on the surface of an illumination liquid fuel filled in a container and the fuel sucked with the wick is burned to generate a colored flame. The fuel is produced by dissolving a flame-coloring substance consisting of a fatty acid alkali or alkaline earth metal salt, a chelate alkali or alkaline earth metal salt and/or an eater of an alcohol and boric acid in a liquid fuel having a boiling point of  $\geq 120^{\circ}\text{C}$ .
